

At the Heart of Your Production

Company Profile - DLoG (UK) Limited

DLoG have been supplying software and hardware solutions since 1985 and is a world leader in quality with over 7,000 customers world-wide. DLoG products were first introduced to the U.K. in 1987 and with the aim of always providing the perfect solution at the right price.

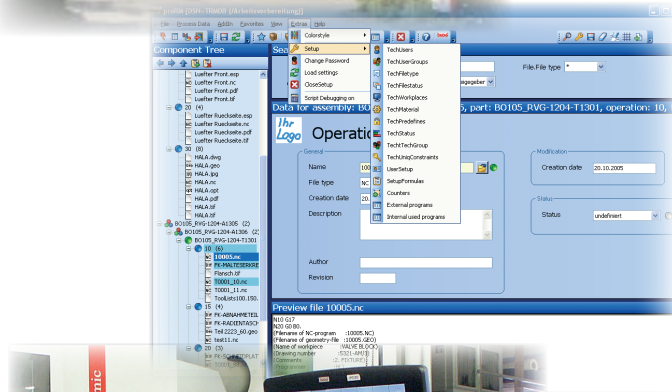

Company History

Initially DLoG developed industrial terminals and software targeted at the manufacturing industry and built a strong customer base throughout the 1990's. However DLoG's vision lead it to realise that as network systems became more sophisticated and e-mail and the internet began to appear the requirement to install PC-based rather than proprietary systems in a manufacturing and industrial environment was increasing all the time. Hence as early as 1990 DLoG released its first industrial PC with touch screen software. It was this innovation that has formed the backbone of its success and the industrial PC, now in its 6th generation, together with its touch screen applications, has continued to form the foundation of its solutions.

As the number of customers continued to rise, the 21st Century has seen DLoG's systems used not only in the manufacturing sector but also in application areas comprising logistics, ports, airports, construction equipment, agriculture, and automation.

Product Development

The software division develops touch screen solutions that have grown to encompass paperless manufacturing, DNC, machine monitoring, factory-wide data collection, OEE reporting and work in progress tracking as well as finite capacity scheduling. Our systems often form an integral part of lean manufacturing initiatives forming the bridge between planning and the production process.

innovation dynamic quality

A particularly successful area has been that of logistics where DLoG have taken industrial computing to the next level and developed vehicle mounted products. Here the DLoG mobile PC range is used to assist with the deployment of warehouse management systems providing up to the minute information and instructions to drivers of fork lift truck on the items to be picked and their location.

Experienced Team

Central to our success is our relationship with our customers. We are always looking for solutions that provide the closest match for our customers' needs while at the same time, providing maximum reliability. The level of know-how needed to achieve this is only obtained through experience and expertise. We ensure this through our focus on certain areas, such as vehicle applications and manufacturing. This focus gives us a deep understanding of our customers' individual requirements and issues.

Just as important as a high level of reliability in our solutions is our after-sales service. We are therefore delighted by the many compliments we receive on our outstanding people skills from our almost exclusively long-standing clientele. All of the technical staff in the U.K. has a minimum of 17 years experience of implementing and supporting DLoG products.

Finally we believe that one final factor makes us different to many of our competitors and this is our dynamism. We want to continue to set ourselves apart from large corporations, which often become paralysed by bureaucracy by offering availability and rapid response to customer problems.

Product Areas

Software

- Shopfloor Data Collection
- Automatic machine monitoring
- OEE Reporting
- DNC
- Production Data Management
- Finite Capacity Scheduling

Hardware

- Touch screen Industrial PC's
- Vehicle Mounted terminals
- Wireless Networking
- Barcode scanners

Services

- Project Management
- System Installation
- Training
- Consultancy
- Service and Support
